Ghulam Hussain

Full-Stack Mobile Developer | Android (Kotlin & Java) · Flutter · iOS (Swift) · KMP · C++ | Clean Architecture | Monetization & Revenue Optimization | Google Play & App Store Compliance Expert
Lahore, Punjab, Pakistan

Summary

Mobile development is not just my profession — it is the craft I have spent the last 6+ years refining across every major platform and technology in the ecosystem. I started my journey as a Junior Android Developer, writing Java and learning the fundamentals of the mobile development lifecycle. Over time, I expanded my expertise beyond Android into Flutter, iOS (Swift), Kotlin Multiplatform, and C++ — evolving into a full-stack mobile engineer capable of delivering robust, cross-platform solutions from a single codebase or fully native implementations, depending on what the product demands. I specialize in architecting and developing high-performance mobile applications built to scale. My technical foundation is rooted in Clean Architecture, MVVM, and SOLID principles — ensuring every codebase I touch is maintainable, testable, and ready for long-term growth. From deeply native Android and iOS applications to unified cross-platform experiences in Flutter and shared business logic via KMP, I bring the right tool to every problem. I approach every project as an engineering problem with a business outcome. Before writing a single line of code, I ask: what does success look like for this product? That mindset drives decisions around architecture, performance, and monetization strategy — three areas I treat as equally important pillars of any successful mobile application. Revenue optimization is one of my core specializations. I have deep hands-on experience with AdMob, Facebook Audience Network, strategic ad placement, A/B testing, and eCPM optimization — building systems that generate sustainable revenue without compromising retention or app quality. I also bring comprehensive knowledge of Google Play and App Store policies, compliance requirements, and publishing best practices — ensuring every application I deliver meets platform standards and reaches users without friction. Currently engaged at Beyond Apps Group, I remain open to freelance projects and consulting engagements where I can contribute cross-platform mobile expertise

to meaningful products. If you are building something ambitious and need a mobile engineer who takes full ownership — from architecture to deployment — let's connect. hus98ain@gmail.com

Experience

Beyond Apps Group

Senior Android Developer

January 2026 - Present (4 months)

Lahore

As a Senior Android Developer at Beyond Apps Group, I am part of a cross-functional engineering team delivering mobile products in the video editing and AI space. My role spans the full development lifecycle — from architecting scalable multi-module systems to ensuring stability, performance, and a seamless user experience at scale.

My primary focus is MyZesty, a feature-rich Android video editor built on a multi-module architecture following MVVM and MVI patterns. Working alongside ML and backend teams, I integrate intelligent features into the Android application and contribute to React Native issue resolution to maintain consistency across platforms.

In addition, I lead the development of Genie, an AI-powered Video Maker and Editor — owning the full lifecycle from architecture design and feature implementation to ML integration and deployment.

Key Responsibilities:

- Developing and maintaining MyZesty using Kotlin and Java across a multi-module architecture
- Leading end-to-end development of Genie, an AI-powered video maker and editor
- Applying MVVM and MVI patterns to ensure scalability and separation of concerns
- Collaborating with ML and backend teams to integrate AI-powered features and consume APIs efficiently
- Contributing to React Native troubleshooting and cross-platform issue resolution
- Conducting code reviews and upholding engineering best practices

- Optimizing app performance, stability, and user experience across diverse Android devices

OZI Publishing

1 year 8 months

Principal Software Engineer

June 2025 - January 2026 (8 months)

Lahore, Punjab, Pakistan

As Principal Software Engineer - Android, I am responsible for the design, development, and optimisation of high-impact mobile applications with over 20 million downloads worldwide.

Key Responsibilities and Achievements:

- Create and maintain scalable, high-performance Android applications with Kotlin, Java, and Clean Architecture.
- Manage the entire app development process from concept to deployment, ensuring code quality, maintainability, and performance.
- Implement monetization strategy while optimising for user experience and revenue growth.
- Mentor and guide Android engineers while promoting best practices in SOLID principles and modern Android development.
- Work cross-functionally with the product, design, and QA teams to create user-centred, impactful solutions.
- Maintain industry-leading app stability and performance, including crash-free and ANR rates.

Senior Android Developer

June 2024 - May 2025 (1 year)

Lahore, Punjab, Pakistan

Designed, developed, and optimized high-traffic, ads-based Android applications, contributing to a portfolio that achieved millions of downloads on the Google Play Store.

Key Achievements:

- Delivered feature-rich apps using Kotlin, Java, MVVM, and Clean Architecture.
- Integrated and optimized ad monetization platforms (AdMob, Facebook Audience Network, etc.) to maximize revenue while preserving user experience.

- Conducted UI/UX improvements and performance tuning, resulting in higher retention and engagement.
- Implemented A/B testing to refine ad placement and user flow for better click-through rates.
- Maintained high app stability, achieving 99%+ crash-free users across multiple releases.
- Collaborated closely with designers, product managers, and QA to deliver timely updates and new features.

Jeux Developers

Senior Android Developer

June 2022 - May 2024 (2 years)

Sahiwal District, Punjab, Pakistan

As a senior Android developer at Jeux Developers, I lead the development of sophisticated mobile applications, leveraging my extensive experience and technical expertise to deliver high-quality products. My role involves strategic planning, hands-on coding, and mentoring a team of developers to ensure we meet our project goals and deliver exceptional user experiences.

Key Responsibilities:

Project Leadership: Oversee the entire Android development lifecycle, from concept and design to deployment and maintenance.

Architecture Design: Design and implement scalable and efficient application architectures, ensuring robust performance and maintainability.

Feature Development: Lead the development of complex features and innovative functionalities using Kotlin and Java.

Code Quality: Maintain high standards of code quality through code reviews, automated testing, and continuous integration practices.

Team Collaboration: Work closely with product managers, designers, and other stakeholders to align development efforts with business objectives.

Mentorship: Mentor junior and mid-level developers, providing technical guidance and fostering a culture of continuous learning.

Performance Optimization: Identify and address performance bottlenecks, enhancing application responsiveness and reliability.

User Feedback Integration: Analyze user feedback and usage data to iteratively improve app features and the user experience.

Achievements:

Successful App Launches: Led the development and successful launch of several high-profile Android apps, achieving significant user adoption and positive reviews.

Innovative Solutions: Implemented cutting-edge technologies and best practices that improved app performance, scalability, and user engagement.

Team Development: Enhanced team productivity and skill levels through effective mentorship and the introduction of modern development tools and methodologies.

Facile Solutions

2 years

Android Developer

July 2021 - June 2022 (1 year)

Sahiwal District, Punjab, Pakistan

I was promoted to Android Developer, took on more responsibilities, and led projects from concept to deployment. This role allowed me to fully leverage my expertise in Java and Kotlin and significantly impact the development and success of various mobile applications.

Key Responsibilities:

Led the end-to-end development of Android applications, from requirements gathering to deployment.

Designed and implemented complex features and functionalities using Java and Kotlin.

Ensured the scalability, performance, and robustness of applications through rigorous testing and optimization.

Collaborated closely with UI/UX designers to create intuitive and engaging user interfaces.

Mentored junior developers, providing guidance and code reviews to maintain high coding standards.

Junior Android Developer

July 2020 - June 2021 (1 year)

Sahiwal District, Punjab, Pakistan

As a junior Android developer at Facile Solutions, I was responsible for supporting the development of mobile applications by contributing to various stages of the development lifecycle. This role provided a solid foundation in Android development and allowed me to refine my skills in Java and Kotlin.

Key Responsibilities:

Assisted in designing, coding, and debugging Android applications.

Collaborated with senior developers to implement new features and enhance existing functionalities.

Participated in code reviews and testing to ensure code quality and performance.

Maintained and updated existing applications to improve the user experience and fix bugs.

Worked with cross-functional teams to understand requirements and deliver solutions.

Education

Bahauddin Zakariya University (BZU)

Bachelor of Science - BS, Information Technology · (November 2018 - March 2022)
